Hi

Anyone experienced this kind of problem? I have OpenSBC Unix Linux Version 1.1.5-101. It has been running fine for the past weeks but suddenly today it stopped. I run a gdb backtrace on the core dump and all I get is this "#0 0x00afc402 in \_\_kernel\_vsyscall ()" and I checked my /var/log/messages I saw "Aug 19 23:57:33 sfosbc OpenSBC[2836]: Caught segmentation fault (SIGSEGV), thread\_id=16169872 name=Transaction, aborting." What could possibly be the cause of the problem.

Thanks,

Oliver

Can you send in the GDB backtrace? You can get this by typing "bt" in the GDB console. Also, please attach the last 100 lines of the log prior to the crash.

Hi Joegen,

Here is the back trace

```
#0 0x00afc402 in __kernel_vsyscall ()
#1 0x00bb9831 in ?? ()
#2 0x00f6a638 in ?? ()
#3 0x00f6bb90 in ?? ()
#4 0x00f6a678 in ?? ()
#5 0x082df215 in PServiceProcess::PXOnAsyncSignal ()
```

Backtrace stopped: frame did not save the PC

Thanks Oliver

 in response to: [oliverkazaam41](#) hmmn. the baktrance is truncated. perhaps you need to set the -C argument to a higher value. please continue sending in backtrace + log-tail so we can crush this bug if it's still lurking.

Hi Joegen,

encountered an SBC crush again. I did get the same backtrace result.

```
#0 0x001d3402 in __kernel_vsyscall ()
#1 0x00bb9831 in ?? ()
#2 0x00190da8 in ?? ()
#3 0x00191b90 in ?? ()
#4 0x00190de8 in ?? ()
#5 0x082df215 in PServiceProcess::PXOnAsyncSignal ()
```

also here is my tail from my last log.

```

I was trying to register OSSPhone when it suddenly crushed. I was having a registration error in OSSPhone when it crushed.

Thanks,

Oliver
